POLYFILM SCRAP AND TRIM COLLECTION SYSTEM

Operation

Trim is collected from multiple production lines by a scrap handling fan and is sent to a scrap collector. A clean air balancing fan pulls the transport air from the collector, allowing the trim to fall freely to a compactor or baler below.

Features

- Reliable and fast trim collection
- Low maintenance
- Automatic operation
- Trim collection for more than one production line
- High density compaction
- Zero pressure at collector outlet

Options

- Additional size reduction/granulation
- Fire prevention protection
- Installation/start-up
- Field service
- Filtration for dust available if needed
