

In-Line Collection For Scrap, Trim, Tissue and Waste

PURPOSE

The Osprey in-line collection unit is used in duct systems to protect fans, filters, and other equipment from contamination by pieces of tissue, poly, or nonwoven material. The unit installs as easily as a piece of duct upstream of the process fan. Any large pieces that may be introduced into the dust system are trapped in the collection basket while the air and smaller particles pass through. Basket changes are made very quickly and easily.

**Vertical Configuration
Requires Less Space**
